

The pharmaceutical industry produces life-saving dialysis and infusion therapies, which require the use of highly purified sodium gluconate for use as physiological buffers in the preparation of critical solutions.

To fulfill our aim of providing the most complete range of safe and reliable products to this segment of the pharmaceutical industry, Roquette is now offering Sodium Gluconate Pharma in a pyrogen free form.

This product is a natural extension to the established range for parenteral applications which include LYCADEX® PF - pyrogen free dextrose monohydrate, PEARLITOL® PF - pyrogen free mannitol, NEOSORB® PF - pyrogen free sorbitol, KLEPTOSE® HPB - pyrogen free HPBCD, and other PF products in the ROQUETTE's range.

Sodium Gluconate Pharma is also a highly purified grade under development for pharmaceutical and cosmetic applications. This product is undergoing ICH stability testing and is currently available for sampling.

Without reliability, where does creativity lead?
